Subject guide to volume 51

General methods in microscopy
High resolution transmission electron microscopy (HRTEM)
High voltage electron microscopy (HVEM)
Holography
Electron diffraction
Convergent beam electron diffraction (CBED)
Reflection electron microscopy and reflection high energy electron diffraction (REM and RHEED)
Energy-filtered imaging and diffraction

Specimen-related methods
Specimen preparation and handling
Microscopic methods, specifically for catalysts and small particles
Microscopic methods, specifically for solid interfaces and multilayers
In situ specimen treatment
Radiation effects (experimental)

Tools
Electron microscope design and characterization

Theories
Electron diffraction and elastic scattering theory, image simulation
Inelastic electron scattering theory
Impact phenomena: Auger, X-ray and secondary electron emission, radiation effects
Contrast transfer theory
